

# Getting Started with Clean Swift

## Feature Implementation Steps

### View Controller

1. Create your user interface.
2. Hook up the `@IBAction`.
3. Add a business logic method to the view controller output and interactor input protocols.
4. Create a *request* object and invoke the business logic method.

### Interactor

1. Implement the *business logic* method.
2. Add a presentation logic method to the interactor output and presenter input protocols.
3. Create a *response* object and invoke the presentation logic method.

### Presenter

1. Implement the *presentation logic* method.
2. Add a display logic method to the presenter output and view controller input protocols.
3. Create a *view model* object and invoke the display logic method.

### View Controller

1. Implement the *display logic* method.
